### **III. OTHER SPECIFIED TESTING**

The following is a general description of certain tests that are performed on representative SUNON fans. Nothing in this document is intended to suggest that these tests are performed on every model of SUNON fan. Moreover, the descriptions that follow each test are meant only to provide a general explanation of each test. If you would like a more detailed explanation as to any test identified in this section, SUNON can provide such an explanation upon request.

#### **1. DROP PROOF TEST**

Fans are packaged in a standard size shipping box and are dropped to the ground from certain heights and angles depending on the weight of the particular box.

#### **2. HUMIDITY PROOF TEST**

The fan is operated for 96 continuous hours in an environment with humidity of 90% to 95% RH at  $60^{\circ}\text{C} \pm 2^{\circ}\text{C}$ .

#### **3. VIBRATION PROOF TEST**

Vibration with an amplitude 2mm and a frequency of 5-55-5hz is applied in all 3 directions (X,Y,Z), in cycles of 1 hour each, for a total vibration time of 3hours.

#### **4. THERMAL CYCLING TEST**

The fan is operated in a testing chamber for 50 cycles. In each cycle, the temperature is gradually increased from  $-10^{\circ}\text{C}$  to  $70^{\circ}\text{C}$  for 90 minutes, and subsequently operated at  $70^{\circ}\text{C}$  for 120 minutes. The temperature is then gradually decreased from  $70^{\circ}\text{C}$  to  $-10^{\circ}\text{C}$  for 90 minutes, and subsequently operated at  $-10^{\circ}\text{C}$  for 120 minutes.

#### **5. SHOCK PROOF TEST**

100G of force is applied in the 3 directions (X,Y, and Z) for 2 milliseconds each.

#### **6. LIFE EXPECTANCY**

The “Life Expectancy” of SUNON fans is determined in SUNON’s reliability test laboratory by using temperature chambers. The “Life Expectancy” of this fan has not been evaluated for use in combination with any end application. Therefore, the Life Expectancy Test Reports (L10 and MTTF Report) that relate to this fan are only for reference.

## IV. CHARACTERISTIC DEFINITION

#### **6. LOCKED ROTOR CURRENT**

Measured immediately after the fan blade is locked.

#### **7. AIR FLOW AND STATIC PRESSURE**

The performance specification of air flow and static pressure shown in this specification for approval is measured using the exhaust method.
